

Release 5 - three strongest fits (all close Sep 23, 2026, 12:00 ET)

DON26BX05-NP004 | OSW26BZ05-DV018 | DON26BZ05-NV071 | SBIR | Release 5 | Q&A closed; direct TPOC contact closed

Only actionable if SAM.gov UEI and SBA registrations already exist. These three were the highest-confidence Release 5 fits. Each has published DSIP questions we have not read (24, 21 and 7 respectively). If registration is not live, treat them as the pattern of topic to watch for next cycle.

Awards (typical)	Navy Phase I ~\$140k-\$240k / 6 months (base + option, per Navy instructions); OSW ~\$250k-\$323k / 6-12 months - verify in the Release 5 instructions
Compliance	No clearance clauses on these three; NP004 and NV071 have no ITAR clause; DV018 none in text
Deadline	September 23, 2026, 12:00 ET - three days from this brief

DON26BX05-NP004 - NAVWAR Open Topic: Unified APNT Operational Awareness and Decision Support

[TOPIC TEXT] "This topic does not seek development of new PNT... hardware systems. Instead, the Department seeks expertise in software architecture, data integration, information management, user experience (UX), human-machine interface (HMI) design, analytics, visualization, and decision-support technologies."

- **What they want:** a single operational picture of GPS/alternate-PNT system health, confidence, threats, degradations and recommended courses of action, ingesting through GPNTS; containerized, on-prem.
- **Build:** data-integration layer over the open-source ASPN / pntOS data types named in the topic, a confidence/degradation model, and a decision-support dashboard; prototype on synthetic multi-source PNT status streams.
- **Resources:** ASPN and pntOS (open source, named in the topic); commercial ops-center dashboard patterns the sponsor explicitly invites (telecom NOC, logistics, industrial monitoring).
- **Bottlenecks:** real GPNTS schemas and feeds arrive after award; APNT vocabulary; 24 unread Q&A entries likely address data availability - read them before writing anything.
- **Why it fits:** the sponsor wrote a software/UX topic and said commercial analogues are welcome. Confidence HIGH.

OSW26BZ05-DV018 - AI/ML-Based Radar Data Compression

[TOPIC TEXT] "Phase I is to explore autoencoder architectures for radar data... Phase I will benchmark compression ratios vs. classical methods." Dual use: "any high-rate sensor (remote lidar, sensor webs)... UAS radar streams or... weather radar data."

- **Build:** complex-valued autoencoders on raw pulses / range-Doppler maps; benchmark ratio vs. fidelity vs. downstream detection; quantization-aware training for the Phase II embedded target.
- **Resources:** public SAR data (MSTAR, Sentinel-1 SLC, Capella open data); the sponsor notes recent literature on neural compression in the complex SAR domain.
- **Bottlenecks:** true raw-pulse data may not be public (processed imagery likely suffices for the Phase I benchmark); 21 unread Q&A entries.
- **Why it fits:** an ML research-and-benchmark task with public data and a stated dual-use market. Confidence HIGH.

DON26BZ05-NV071 - Dynamically Generated, Articulated 3-D Training Content

[TOPIC TEXT] "a low-code/no-code software platform for the automated generation of AR/MR training content that requires minimal source media (e.g., smartphone photos, video, Computer-aided design model, or schematics)"

- **Build:** photos/CAD to Gaussian-splat or NeRF reconstruction, automated part segmentation to infer articulation, procedural-logic authoring without code, export to Unity/Unreal and Navy HMDs.
- **Resources:** open-source 3D Gaussian Splatting / NeRF pipelines, part-segmentation models, Unity/Unreal exporters.
- **Bottlenecks:** reliable automatic articulation from static reconstructions is the unsolved piece; Navy LVC export standards; 7 unread Q&A entries.
- **Why it fits:** largest civilian market of any topic reviewed (industrial training, e-commerce, VR). Confidence MEDIUM-HIGH.

Decision

If registrations exist and one proposal is feasible in three days, NP004 is the one: pure software, open-source starting point, sponsor-stated commercial analogues, no compliance clauses. Otherwise, let Release 5 go and put the effort into the Release 6 briefs (01-07), which have a month and an open Q&A window.
